FirstNet expands across New Jersey to advance public safety communications capabilities

Public safety's network supports COVID-19 emergency response

New Jersey's first responders are getting a major boost in their wireless communications with the addition of new, purpose-built FirstNet cell sites and other network enhancements statewide. The new infrastructure is part of the FirstNet network expansion taking place across the state, bringing increased coverage, capacity and capabilities for public safety.

Six new FirstNet cell sites have launched in communities identified by state and public safety stakeholders as priority locations. With FirstNet, it's about where first responders need connectivity. That's what is driving our FirstNet build. The sites launched in:

- **Bergen County:** 2 new sites

Reliable connectivity for a national crisis

During the pandemic, Americans have been working from home, schooling children from home, and using record-setting bandwidth. One fire chief talks about how public safety's network has held up during COVID-19. [WATCH VIDEO](#)

FirstNet helping Coroner's Office stay connected

By Danielle Noone

Madison County Coroner, Indiana

Reliable communication is very important when it comes to the coroner's office. We work a lot with dispatch and law enforcement. We need to get to the scenes quickly to preserve scene integrity. And we need to make sure we're getting everything we need. So it's really important for our response time because time is of the essence.

Before FirstNet, it was all phone calls. We would get a call from dispatch and find out what the situation was – the address, officer or medic on scene to call. And then I would get off the phone, call that medic or officer; get off the phone again and call whoever is on call for

were turned on, including 1 in Lyndhurst that improves coverage around Delafield Avenue, River Road, Route 7 and Valley Brook Avenue. A 2nd site in Ramsey improves coverage around Erie Plaza.

- **Gloucester County:** A new site improves coverage around Delsea Drive and Route 55 in Franklinville.
- **Monmouth County:** This new site in Wall provides coverage around Campus Parkway and Highway 34.
- **Passaic County:** The new site in West Milford improves coverage around Burnt Meadow Road, Crescent Drive, Snake Den Road and surrounding areas.
- **Sussex County:** This new site in Sparta improves coverage around Newtown Sparta Road, Sparta Avenue, Andover Road and Sussex Mills Road.

FirstNet is the only nationwide, high-speed broadband communications platform dedicated to and purpose-built for America's first responders and the extended public safety community. It's built with AT&T* in a public-private partnership with the First Responder Network Authority (FirstNet Authority) – an independent agency within the federal government.

That's why AT&T has a responsibility unlike any other network provider. And unlike commercial networks, FirstNet provides always-on priority and preemption for first responders. This helps ensure New Jersey's first responders connect to the critical information they need – every day and in every emergency. Plus, it's giving first responders unthrottled access to the nation's fastest overall network experience.¹

We're actively extending the reach of FirstNet to give agencies large and small the reliable, unthrottled

The new infrastructure is part of the FirstNet network expansion taking place across the state, bringing increased coverage, capacity and capabilities for public safety.

connectivity and modern communications tools they need. In addition to the purpose-built sites, the FirstNet build has already brought New Jersey's first responders:

- **Public safety-specific advanced capabilities** – FirstNet is the only nationwide platform that gives first responders entire communication ecosystem of unique benefits including mission-centric devices, certified applications and *always-on*, 24-hours-a-day priority and preemption across voice and data.
- **Unparalleled emergency support** – State and local agencies on FirstNet in New Jersey also have 24/7 access to a nationwide fleet of 76 land-based and airborne deployable network assets. These portable cell sites can either be deployed for planned events or in emergencies at no additional charge. The FirstNet Response Operations Group – led by former first responders – guides the deployment of the FirstNet deployable assets based on the needs of public safety.
- **Free smartphones for life for public safety agencies** – We've expanded the benefits of FirstNet for state and local agencies across

New Jersey – spanning law enforcement, fire, EMS, healthcare, hospital emergency departments, emergency management and 911 operations. Now, they can stay up-to-date with free smartphones for life at no additional cost on their FirstNet Mobile—Unlimited plans.² This means first responders across agencies of all sizes will have affordable access to their network for decades to come.

“New Jersey's first responders deserve fast, reliable and dedicated coverage across the state to help them effectively and efficiently address incidents. And with FirstNet, that's exactly what they're getting,” said Charlene Brown, president, AT&T New Jersey.

“We couldn't be more pleased to support the public safety mission and bring the state's first responders – and residents – greater access to the connectivity they need. Working with public safety we've made FirstNet nimble, adaptable and ready to scale for even the most severe situations.” The COVID-19 health crisis illustrates precisely why public safety fought for the creation of FirstNet. Where public

safety goes, we go. FirstNet has answered the call for tornadoes, hurricanes, wildfires, floods and other natural disasters. But with COVID-19, it is like experiencing a perpetual emergency in every community across the country. Public safety's network is being tested in a completely new way, and it's hitting the mark. "FirstNet is a dedicated broadband platform for public safety, by public safety," said FirstNet Authority CEO Edward Parkinson. "We worked hand-in-hand with New Jersey's public safety community to understand their needs for the network. And these network enhancements are a prime example of how that input and feedback is becoming reality. We look forward to supporting New Jersey's first responders' use of FirstNet to help them save lives and protect communities."

In addition to further elevating public safety's connected experience in support of their emergency response, this new infrastructure will also help improve the overall coverage experience for AT&T wireless customers in the

area. These sites were constructed with Band 14 spectrum, as well as AT&T commercial spectrum. Band 14 is nationwide, high quality spectrum set aside by the government specifically for FirstNet. Residents, visitors and businesses can take advantage of the AT&T spectrum bands, as well as Band 14 when additional capacity is available.

Helping Madison County Coroner's Office stay connected

(Continued from Page 1)

the coroner's office that day and dispatch them to that location.

Now, I get the call from dispatch and either shoot a text or call my deputy and let them know. But I don't have to text them the address, I don't have to text them the details. They can get right on their Sonim phone and know all the details and mark en route.

Keeping teams connected

FirstNet also has really helped improve our communication with each other.

I could be on a scene or one of my deputies can be on a scene. And we could have a question or need another investigator to take a look. We can use the resources on our phones to send a picture or a video. That's in real life, like they're right there with us.

There's an application available to us that lets us share video and photos. Sometimes depending on where the evidence is, it's helpful to have a second opinion.

I was recently on an investigation where there was rather large equipment and power tools that I'm just not knowledgeable on. I was able to use FirstNet to share video with one of my deputies who was off scene. He helped walk me through some things – such as gathering serial numbers and where to find the serial numbers. It was very helpful in completing our investigation.

So prior to FirstNet, I still could have called one of my deputies, but I would not have been able to share the information or the video with them.

Communicating in a pandemic

Our communications in the Madison County Coroner's Office have changed dramatically during this pandemic. We are more in tune with all of the county now. We are part of the COVID task force and we've been working hand-in-hand with the Madison County Health Department.

Dispatch has been asking certain questions that help triage a lot of these patients. For example, was the person running fever, coughing, have

FirstNet has really helped improve our communication with people who are at the scene.

“Communication is key – whether it's with people at dispatch, people at the scene, or people we need to get there to complete our death investigation in a timely manner.”

Danielle Noone
Madison County Coroner

shortness of breath or possible exposure. That's helped us determine if we needed to go to the scene for a death investigation. And do we need to bring COVID tests so we can obtain samples without having to go back a day later.

FirstNet has really helped improve our communication with people who are at the scene. We're able to see if things are changing. We can see who is at the scene already. Sometimes we have to call in Child Protective Services and victims' advocates. So, using FirstNet – and the apps in the FirstNet catalog – we are able to see

all of that because it's all documented within the call. It's very helpful – and especially when we go back to do our reports and can see the exact timeline of everything.

Available 24/7

The coroner's office chose to put FirstNet on our personal cell phones, too, because we work 24/7. I always have to be available. But I'm not always carrying my work phone. Having FirstNet on my personal cell phone has made me available to dispatch at all times.

We decided to do that because, even though we are the last responders in almost every case, we are still considered first responders because we need to be called out in emergency situations.

Bottom line, FirstNet has made the coroner's office job easier. Communication is key – whether it's with people at dispatch, people at the scene, or people we need to get there to complete our death investigation in a timely manner.

Danielle Noone is the Madison County Coroner in Madison County, Indiana.

NEWS FOR FIRSTNET USERS

Cybersecurity Aware App

The FirstNet Cybersecurity Aware app, now FirstNet Certified and in the FirstNet App Catalog, is the place for first responders to learn how to protect themselves and their agencies from phishing emails, malicious links and other cyberscams. The app contains an in-depth training video series given by cybersecurity analysts, an animated video series depicting cybercrime scenarios in public safety situations and a brand new video series on COVID-19 related scams.
